

Health monitoring of mole rat colonies can be conducted through a combination of pathology, microbiology, parasitology and PCR. Also, any kind of custom monitoring is possible.

Different sample types can be used for the different diagnostic procedures:

S - Serum  
BS - Blot spot  
T - Tissue  
F - Feces

DS - Dry swab  
MS - Microbiology swab (medium swab)  
DSS - Deep skin scrape  
FS - Fur swab
